

DakshinLink Network Element Management

Technical Assistance Centre - Platform Error Codes

Use this manual when an appliance displays a numbered platform alert. Values identify support state only and may require independent verification.

Code	Severity	Description	Support action
45009	Warning	The administrative account remains in the factory credential state.	Use the chassis serial number as the temporary administrator password, then rotate the credential after enrolment.
45010	Warning	The remote support licence has expired.	Read-only monitoring remains available. Contact the TAC for renewal.
31004	Info	Configuration recovery profile is available.	Use the approved redeployment process before disruptive maintenance.
22017	Info	External routing adjacency detected.	Compare peer ownership with the current topology document.

Document classification: training network operations. This document intentionally contains no device serial, ASN, address or password.
